

MIRADRY INSTRUCTIONS

miraDry is a non-surgical treatment designed to permanently reduce underarm sweat, odor, and hair^{1,2} with as little as one treatment, in one hour, and with immediate results. Clinical studies have demonstrated an average reduction of 82% in underarm sweat. Like any other medical procedure, results can vary from patient-to-patient.

PRE-PROCEDURE INSTRUCTIONS

4-6 DAYS BEFORE PROCEDURE:

Shave both underarms. By the time you come in for your procedure, there will be a little bit of hair growth to identify the area to be treated. If you forget to shave, we will recommend that you reschedule your procedure date.

1 DAY BEFORE PROCEDURE:

Do not wear any deodorant or antiperspirant.

DAY OF PROCEDURE:

Wear clothes with loose arm holes for easy access to the treatment site, e.g. tank top, sports bra, or camisole

Plan for the procedure to last an hour

POST-PROCEDURE INSTRUCTIONS

Immediately ice the treated area using towel-wrapped ice packs and use non-prescription anti-inflammatory medication (e.g. ibuprofen) to reduce swelling. Continue as needed over the new few days.

Keep the treated area clean (wash with water and gentle liquid soap) and apply an over-the-counter antibiotic ointment (e.g. Neosporin) to prevent infection.

Avoid shaving or applying antiperspirant/deodorant for the next few days. If deodorant / antiperspirant is still desired after the treatment, discard any partially used product and open a new product. You should notice odor reduction immediately, so deodorant should not be necessary.

Wait three days before resuming rigorous exercise and activity.

Wear loose fitting tops to avoid underarm irritation for the next four to five days depending on your swelling.

Emergency Contacts

Doctor Dorner is available twenty-four hours a day. If you are having problems please call the office at 614-336-9000 and press one to have him paged. Be sure to leave your contact information.

For any life-threatening emergencies, you should call 911.

Notes:
